DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-5, 10 and 11, drawn to a polynucleotide, classified in class 536, subclass 23.2.
 - II. Claim 6, drawn to a polypeptide, classified in class 435, subclass 183.
 - III. Claim 7, drawn to a first method of using the polynucleotide, classified in class 530, subclass 69.1.
 - IV. Claim 8, drawn to a second method of using the polynucleotide, classified in class 435, subclass 6.
 - V. Claim 9, drawn to a third method of using the polynucleotide, classified in class 536, subclass 24.33.

In addition to an election of one of inventions I-V listed above, Applicant is required to elect one of the following inventions to which the claims must be restricted.

Group A, drawn to SEQ ID NO: 1 or SEQ ID NO:2

Group B, drawn to SEQ ID NO: 3 or SEQ ID NO:4

Group C, drawn to SEQ ID NO: 5 or SEQ ID NO:6

Group D, drawn to SEQ ID NO: 7 or SEQ ID NO:8

Group E, drawn to SEQ ID NO: 9 or SEQ ID NO:10

Group F, drawn to SEQ ID NO: 11 or SEQ ID NO:12

2. The inventions are distinct, each from the other because of the following reasons:

Groups A-F are unrelated as they are drawn to structurally distinct polynucleotides encoding different polypeptides and obtained from different sources.

3. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects. The polynucleotide is chemically, structurally, biologically and functionally distinct from the polypeptide.

4. Inventions I and III-V are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in the methods of III-V, each method has different steps, uses different reagents or starting materials, and has different outcomes.

5. Inventions II and III-V are unrelated. In the instant case the methods of III-V do not require the polypeptide of II. Also, the polypeptide of II can be made synthetically (not recombinantly) or can be obtained from its native plant source.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, different searches and recognized divergent subject matter, restriction for examination purposes

as indicated is proper. Furthermore, each of the sequences would require a separate database search.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phuong T. Bui whose telephone number is 571-272-0793.
